Powering Healthcare Transformation

The Global Center for Health Innovation (Global Center) is a one-of-a-kind entity where individuals and organizations on the cutting edge of health and healthcare innovation collaborate to solve the industry’s complex challenges.

Through collaboration, Tenant Partners discover new ways to improve the delivery of patient-centric, high quality, cost effective healthcare.
Global Center for Health Innovation Presents Perspectives on Healthcare Innovation

For more information on the Global Center and these Tenant Partner collaborations, please contact:

In this package, you’ll find perspectives on healthcare innovation touching numerous facets of the patient’s journey as told by the Tenant Partners. The perspectives demonstrate the knowledge, expertise and overall contributions that Tenant Partners are making to improve patient-centric care delivery. These perspectives cover themes of Access to Care, Value Based Care, IT Innovation, Cybersecurity and Interoperability, among others.
Public and private reform in U.S. healthcare is ushering in a new kind of system that integrates technology in ways that rewards innovation and collaboration, and puts the patient – not the provider – at the center of care. It is no longer necessary for patient care to be delivered within the four walls of a traditional hospital setting. Now care can be accessed as easily as booking a flight.

This storyline explores how healthcare organizations touch patients through virtual technologies and non-traditional settings to deliver care where and when it’s needed. Several Global Center Tenant Partners are at the forefront of this changing landscape, making it easier for patients everywhere to access high quality, affordable care.
As a number of public and private drivers intersect, many of which contributed to legislative healthcare reform, patients are becoming increasingly involved in their care and embracing a self-oriented, more consumer-focused mindset to making healthcare decisions for themselves and their families.

In this storyline, Tenant Partners examine how solving the ‘Healthcare Value Equation’ merits a more consistent and transparent view of the quality and cost related to the care being delivered to patients as the consumers of that care. This includes utilizing appropriate collection and risk-adjusted methods to ensure relevant data informs outcome-oriented, evidence-based approaches.
Enterprise Solutions for the Innovative Employer

Healthcare transformation encourages employers to exert more control over how their health plans provide service to their employees and dependents. These new arrangements enable more creativity in network design, driving innovative solutions for all participants.

This story details how Global Center Tenant Partners lead the way by working directly with employers to maintain quality, cost effective employer sponsored health plans that give employees the care they need without shifting the financial burden.
The recent U.S. Department of Health and Human Services (HHS) and Centers for Medicare and Medicaid Services announcement accelerates the movement away from Fee-For-Service (FFS). It also provides greater clarity on the urgent pace of change that demands providers accept new institutional and market risk to perform against new reimbursement expectations.

This shift away from a traditional FFS requires providers to evaluate the future of care delivery models and consider long term investment needs in infrastructure, reporting capabilities, education, and transformational leadership to meet the new expectations of patient centered, high quality, affordable care. This story details the work of Tenant Partners on developing solutions to some of the most critical and complex challenges facing providers, payers and patients today.
Why is Operational Innovation So Important for the Healthcare Industry?

Change has swept the healthcare industry in megabytes and 140 characters or less. Faced with the demands of tech-savvy patients, providers now recognize what once worked well in providing care and interacting with patients, might not work much longer. Now considered consumers of healthcare, patients need to feel informed and be assured they’re making the best decisions for themselves and their families.

This story features the collective approach of several Global Center Tenant Partners within four areas of innovation that healthcare organizations must focus on to innovate toward new and future needs. These include, company culture evolution, resource library creation, new technology adoption and industry collaboration.

The essence of interoperability is getting the right information to the right people at the right time. This saves money – but more importantly, it saves lives. It provides a complete and accurate view of the patient – anytime and anywhere – resulting in safer, higher quality and more cost effective care.

Global Center Tenant Partners are ensuring healthcare providers, patients and facilities have seamless interoperability between their systems. This storyline explores how organizations should focus on opportunities to support interoperability that enables widespread, secure health information exchange between care professionals, providers and facilities.

Looking through the Prism: The Healthcare Cybersecurity Journey

The U.S. Department of Health and Human Services (HHS) estimates more than 120 million people have been compromised in more than 1,000 separate data security breaches within organizations handling protected health data since 2009. It is a stark reality with high consequences for patient safety, loss of reputation and goodwill of healthcare organizations, and poses significant clinical and business disruptions.

A number of Global Center Tenant Partner organizations work tirelessly to ensure the safety and security of a health system’s electronic health records. This story explores the three key ingredients essential to a strong foundation for any cybersecurity program people, processes and technology.
